DETAILED ACTION

Claim Objections

Claims 1, 3, 4 are objected to because of the following informalities: The claim language has grammatical errors such as "wherein said filtering gain unit adjusting...". Appropriate correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Suzuki, US Patent 6,381,333. Suzuki discloses a sound processing circuit comprising filtering gain unit 2LF; mixing gain unit 3A, 2C; noise reduction gain unit LPF 4. The filtering gain unit 2LF adjusts a period and emerging time of subwoofer signal LFE. The mixing gain unit mixes the center channel C with the adjusted subwoofer signal. The low pass filter 4 acts as a noise reduction gain unit by removing high frequency signals.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person

Art Unit: 2615

having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 5-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Suzuki.

Suzuki discloses a 5.1 channel signal output mixer circuit. Suzuki does not disclose that the mixer circuit is embodied in a external case coupled to an earphone in a DVD device having a 5.1 channel output jack for an earphone or in a TV having a 5.1 channel output jack for an earphone. Examiner takes Official Notice that one of ordinary skill in the art would have been motivated to provide the mixer circuit for any device that utilized downmixing for earphones for the express purpose of making the 5.1 channel sound source compatible with reproduction devices having less than 5 output channels. Therefore, it would have been obvious to one of ordinary skill in the art at the time of invention to implement the apparatus of Suzuki in any of the claimed devices.

Allowable Subject Matter

Claims 2-4 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Sato, US Patent 6,882,733; Ju, US Patent Application Publication 2005/0084119; Katayama et al, US Patent 7,095,865; Kasai et al, US Patent 6,067,360.
